

AMENDMENTS TO THE SPECIFICATION:

Page 9, amend paragraph [0053] as:

[0053] As shown in fig. 6, if the writing area of the electronic whiteboard is large, the area of the induction layer should be enlarged correspondingly, and the large electromagnetic induction layer can be assembled by multiple wire electromagnetic induction layers 5 and 5' with membranes, wherein wire education electrical connection means 56 and 57 along the X and Y axes are provided on each piece of the wire lattice electromagnetic induction layer, and ~~said~~ each piece of the wire lattice electromagnetic induction layer is connected by means of the wire education electrical connection means. In the present invention, as illustrated in fig. 7, each wire winded along the Y axis is winded with multiple turns to form a number of loops with a plurality of latitudes substantially uniformly distributed across the entire wire lattice and each wire winded along the X axis is also winded with multiple turns to form a number of loops with a plurality of longitudes substantially uniformly distributed across the entire wire lattice.
